SUMMARY

Full-stack Developer with hands-on experience in React (TypeScript), .NET (C#), and SQL Server through enterprise internship projects. Experienced in developing RESTful APIs, workflow management systems, and web applications with a strong focus on efficient frontend-backend integration.

A collaborative developer who is open to diverse perspectives and committed to continuous learning.

WORK EXPERIENCE

Software Developer (Internship)

Jun 2025 - Mar 2026

Thai Roong Ruang Technology Co., Ltd.

Architected and developed a full-stack Corrective Action System (CAS) to digitize 100% of paper-based reporting, achieving a 50% reduction in workflow latency through automated hierarchical approval and real-time notifications.

- Designed workflow-oriented UI layouts and wireframes using Figma to improve usability and task visibility.
- Developed responsive React (TSX) interfaces for workflow tracking, data management, and approval status monitoring.
- Developed RESTful APIs using .NET (C#) with automated email notifications and overdue task tracking features.
- Designed and managed MS SQL Server database schemas and stored procedures to support workflow automation, task tracking, and quality management processes.
- Collaborative Testing: Supported team members in functional testing for web and Android projects, delivering actionable feedback that improved UI consistency and overall user satisfaction.

EDUCATION

Mahanakorn University of Technology

B.Eng. in Computer Engineering and Artificial Intelligence

JUN 2022 - MAY 2026

Major in Data Science and Systems Management Engineering (DSS)

- GPA: 3.33

PROJECTS

Restaurant POS System | Java-based Web Application

- Designed and developed an interactive restaurant POS interface with order management and billing workflows.
- Implemented automated billing and tax calculation logic using Java-based application logic and dynamic UI interactions.

Meeting Room Reservation System | Full-stack Web Application

- Developed a meeting room reservation system using Vue.js for the frontend and Go (Golang) for backend API development.
- Integrated Oracle Database to manage reservation data and explore frontend-backend data communication workflows.

TECHNICAL SKILLS

- Languages: TypeScript, C#, Go, Java
- Frameworks & Libraries: React (Vite), .NET 8, Vue.js, Tailwind CSS, Material UI (MUI)
- Database: MS SQL Server, Oracle, MongoDB
- Tools: Git, Azure DevOps, Postman, Swagger, Figma, Claude, Gemini
